

1-ON-1 COACHING · BUILT FROM YOUR APPLICATION

SHELDAN: RECOMPOSITION & STRENGTH PROGRAM

CLIENT

Sheldan Flowers

COACH

Echelon Fitness Collective

GOAL

Body Recomposition

TIMELINE

12-Week Foundation Block, open-ended
after (no fixed deadline)

STRUCTURE

3–4 training days (Push / Pull / Legs +
Conditioning & Core)

LEVEL

Intermediate

A push/pull/legs build on the exact split you're already running, tightened with real progression, a nutrition setup built around the one gap you named, and a dedicated conditioning day for the waist and body-fat side of recomp. Built straight from your application, we'll tighten it up once we connect.

WHY I BUILT IT THIS WAY

So in your onboarding you said you're already running push, pull, legs, and that you're intermediate, and you rated your commitment a 10 out of 10, I'm holding you to that number. You also told me the thing that's actually held you back wasn't training, it was dieting alone with no real guidance on counting calories. That's the piece we're fixing first. I'm not throwing out what you're already doing, your split stays, I'm just adding real progression to it, a nutrition structure, and a tracking system so this time it actually sticks. We haven't hopped on a call yet, so treat this as the first draft, we'll tighten whatever needs it once we connect or once you log Week 1.

On keeping your split

You already told me you've got a plan you like and you're following it, push, pull, legs. I'm not touching that, that's consistency you already built. What I added is the piece that was missing: real progressive overload with numbers logged in the Hub instead of just going through the motions.

On the weight range and waist number

You gave me more than one marker for the same goal, 195–225 lb, a 36-inch waist in your pants size, and under 27% body fat. All three point at the same thing, recomposition, not just a number dropping on the scale. So this program is built to hold onto your muscle while the fat comes down, not just make the scale move.

On professional accountability

You told me straight up that coaching helps because it's professional accountability instead of just people who love you. That's exactly what the tracking below is, not a suggestion, a standing check-in, every week.

Now about your eating

I know dieting alone without much guidance on counting calories is what didn't work last time. So imma give you the structure that was missing instead of another list of foods to avoid, see the Nutrition Protocol below.

On loads: I don't have your working weights yet since this came straight from your application, not a session. So every Load below reads “Establish Week 1, log in Hub” until you log real numbers, that first week becomes the baseline everything after builds off.

Programmed to the ISSA CPT standard, for Echelon Fitness Collective.

12-WEEK FOUNDATION BLOCK

PHASE	WEEKS	FOCUS
Phase 1: Foundation & Load Establishment	1–4	Learn and execute the push/pull/legs split with real tracking. Every working weight gets established in the Hub in Week 1, that becomes the baseline everything after progresses against. Nutrition holds at maintenance while four weeks of your real trend-weight data comes in, no deficit guessing.

Phase 2: Progressive Overload & Deficit Start	5–8	Add load on the main lifts using your Week 1 baseline. Nutrition steps into a modest deficit calculated off your actual Phase 1 trend weight, not a guess. Day 4 conditioning volume increases. Deload Week 8.
Phase 3: Recomposition Push & Reassessment	9–12	Hold the deficit, protein stays non-negotiable, Day 4 conditioning intensifies. Week 12: full remeasure, weight, waist, photos, against your Week 1 baseline, then we decide together whether to extend this block or start the next one.

WEEKLY STRUCTURE

DAY	FOCUS	WHY IT'S PLACED HERE
Day 1	Push (Chest, Shoulders, Triceps)	Fresh CNS for the heaviest pressing of the week, opens the split the same way your own PPL cycle already does.
Day 2	Pull (Back, Biceps, Rear Delts)	Full recovery from Day 1 pressing, balances the pressing volume so your shoulders stay healthy.
Day 3	Legs (Quads, Hamstrings, Glutes, Calves)	The biggest compound day of the week, placed with a full recovery day on either side.
Day 4	Conditioning, Core & Recomp Finisher	The piece your current split doesn't have, direct work toward the waist and body-fat side of recomp, not just the lifting side.

On a 3-day week, skip Day 4 or fold the core circuit into Day 3's finisher. On a 4-day week, run all four as written.

HEAVY · ~50–60 MIN

DAY 1 / PUSH — CHEST, SHOULDERS & TRICEPS

WARM-UP

- Band Pull-Aparts — 2 × 15
- Arm Circles — 2 × 10/direction
- Push-Up to Down Dog — 2 × 8
- Shoulder Dislocates (band or PVC) — 2 × 10

MAIN LIFTS

EXERCISE	SETS × REPS	LOAD
Barbell Bench Press	4 × 6–8	Establish Week 1, log in Hub
Seated Dumbbell Shoulder Press	3 × 8–10	Establish Week 1, log in Hub
Incline Dumbbell Press	3 × 10–12	Establish Week 1, log in Hub
Cable Lateral Raise	3 × 12–15	Establish Week 1, log in Hub

Cues: Bench press, shoulder blades pinned, feet driving into the floor, bar path stays over the chest not the face. Shoulder press, ribs down, no lower-back arch to substitute for shoulder range. Lateral raise, lead with the elbow, stop at shoulder height, this is a shoulder isolation move not a momentum swing.

TRICEPS FINISHER

EXERCISE	SETS × REPS	LOAD
Triceps Pushdown	3 × 12–15	Establish Week 1, log in Hub
Overhead Rope Tricep Extension	2 × 15–20	Establish Week 1, log in Hub

MODERATE · ~50 MIN

DAY 2 / PULL — BACK, BICEPS & REAR DELTS

WARM-UP

- Band Pull-Aparts — 2 × 15

- Cat-Cow — 2 × 8
- Scapular Retractions — 2 × 10

MAIN LIFTS

EXERCISE	SETS × REPS	LOAD
Lat Pulldown	4 × 8–10	Establish Week 1, log in Hub
Seated Cable Row	3 × 10–12	Establish Week 1, log in Hub
Face Pulls	3 × 12–15	Establish Week 1, log in Hub

Cues: Lat pulldown, pull to the upper chest, elbows drive down and back, no leaning back to cheat the range. Row, chest stays tall, squeeze the shoulder blades together at the finish before releasing. Face pulls, elbows high, this is the rear-delt and posture piece pressing volume doesn't cover.

ARM FINISHER

EXERCISE	SETS × REPS	LOAD
Barbell Curl	3 × 10–12	Establish Week 1, log in Hub
Hammer Curl	2 × 12–15	Establish Week 1, log in Hub

HEAVY · ~55–65 MIN

DAY 3 / LEGS — QUADS, HAMSTRINGS, GLUTES & CALVES

WARM-UP

- Bodyweight Squats — 2 × 15
- Glute Bridges — 2 × 15
- Leg Swings (front-back & side-side) — 2 × 10/side

MAIN LIFTS

EXERCISE	SETS × REPS	LOAD
Back Squat	4 × 6–8	Establish Week 1, log in Hub
Romanian Deadlift	3 × 8–10	Establish Week 1, log in Hub
Walking Lunges	3 × 10–12/leg	Establish Week 1, log in Hub
Leg Press	3 × 10–12	Establish Week 1, log in Hub

Cues: Squat, brace before the descent, knees track over the toes, drive through mid-foot out of the hole. RDL, hips travel back not down, soft knee bend, feel the hamstring stretch before reversing the movement. Walking lunges, torso stays upright, front knee doesn't drift past the toe.

FINISHER

EXERCISE	SETS × REPS	LOAD
Lying Hamstring Curl	3 × 12–15	Establish Week 1, log in Hub
Standing Calf Raise	3 × 15–20	Establish Week 1, log in Hub

MODERATE · ~35–40 MIN · THE FLEXIBLE DAY

DAY 4 / CONDITIONING, CORE & RECOMP FINISHER

CONDITIONING BLOCK

- Incline Treadmill Walk (or steady-state cardio of choice) — 20–25 min — Establish Week 1, log in Hub

CORE CIRCUIT (2–3 ROUNDS)

- Hanging Knee Raises — 3 × 12–15
- Plank — 3 × 30–45 sec
- Bicycle Crunches — 3 × 20–30 total
- Dead Bugs — 3 × 10/side

OPTIONAL FINISHER

EXERCISE	SETS × REPS	LOAD
Farmer's Carry	3 × 30–40 sec	Establish Week 1, log in Hub

This is the day your current split doesn't have. The waist and body-fat side of recomp responds to conditioning volume and a calorie structure, not more lifting, this day and the nutrition protocol below carry that load together.

NUTRITION PROTOCOL

Now about your eating: you told me the real gap already, dieting alone without much guidance on counting calories. That's not a discipline problem, that's a structure problem, so here's the structure. Exact gram targets lock in once you log your starting weight in the Hub Week 1, here's what Week 1 runs on.

MACRO	TARGET (LOCKS TO EXACT GRAMS ONCE STARTING WEIGHT IS LOGGED)
Protein	~0.8–1.0 g per lb of bodyweight
Fat	~0.3–0.35 g per lb of bodyweight
Carbs	Fills remaining calories after protein & fat, adjusted by phase
Water	~0.5–1 oz per lb of bodyweight, higher on Day 1 & Day 3

- **Phase 1 (Weeks 1–4):** we hold at maintenance while I get four weeks of your real trend weight, no guessing at a deficit before I have real numbers.
- **Phase 2 (Weeks 5–8):** we step into a modest deficit, roughly 300–500 kcal under maintenance, calculated off your actual Phase 1 average, not a number I made up on Day 1.
- **Phase 3 (Weeks 9–12):** we hold the deficit, check in weekly against your 36-inch waist and sub-27% body fat target, and adjust off your real numbers.
- Protein at every meal, non-negotiable, that's the number that keeps your muscle while the fat comes off, and it's exactly what you said was missing last time.

- Your sleep is sitting at 6–7 hours, pushing that toward 8 is going to help your recomp more directly than another set in the gym, low sleep raises appetite and blunts recovery both.

General fitness and nutrition guidance from your coach, not a substitute for individualized clinical dietary advice.

ACCOUNTABILITY: WHAT WE TRACK

WEEKLY IN THE HUB

You rated your own commitment a 10 out of 10 and told me professional accountability is why coaching works for you when going it alone hasn't. This is how that shows up every week, not just a feeling.

WHAT	FREQUENCY	WHY
Sessions completed	Weekly	Target 4/4 on a 4-day week (3/3 on a 3-day week), the number that predicts your outcome more than any else.
Body weight	1×/week, same morning conditions	Starts your Week 1 baseline, everything else, including nutrition targets, gets built off this.
Protein grams	Daily, even if estimated	The one number you said was missing last time, now negotiable.
Progress photos	Every 2 weeks	Recomposition shows in the mirror and the waistband before it shows on the scale.
Waist measurement	Monthly	Direct check against your own 36-inch target.

Everything above came straight from your application, keeping the split you're already running and fixing the one thing you said got in the way last time. Log Week 1 in the Hub, get your working weights and starting weight in, and I'll tighten whatever needs it from there.

ECHELON FITNESS COLLECTIVE: STRUCTURE. ACCOUNTABILITY. COMMITMENT. FAITH.
